## LOOPIX® Wound Drainage Tube Fixation Device

LOOPIX® Wound Drainage Tube Fixation Device indicates the sequence of releasing paper removal with color numbered: **1** **2**

## LOOPIX® Specifications

| Model | Inner Diameter of Rotating Ring | Pad Size | Size Range of Catheters |
|---|---|---|---|
| GD8090-A | 30 mm | 85 x 75 mm | Fr6 ~ Fr28 |

30mm

## LOOPIX® Structure

Ratchet Tie Fastener
Outter Ratchet Ties
Rotating Loop
Pulling Ring
Hoop Band
Unlocking Button
PSA Dressing
Absorbent Gauze

## Precautions For Use

**Intended Use：**
Loopix® is intended to fix the drainage tube and change the traditional suturing method. Enhance the fixing force and avoid secondary trauma to the skin.

**Contraindications：**
1. Do not use Loopix® to secure vascular catheter.
2. Do not use Loopix® on infected\excessive exudation wounds or skin defected around the catheter.
3. Use with caution if patient is allergic to PSA tape.

**Warnings：**
1. Single use only.
2. Must clean and dry the application area before use.
3. Change the Loopix® device regularly. The maximum time should not exceed 7 days.
4. Contact the medical staff immediately if large amount of exudate occurs

# Step-By-Step Application

## LOOPIX® Wound Drainage Tube Fixation Device
### Preparation Before Use:

1. Check the incision, if there is any infection, tissue defect or excessive exudation, please treat it before using Loopix®.

2. Clean and dry the skin surrounding the intubating incision before applying Loopix®, to avoid the adhesive being weakened.

**1** Pass the drainage catheter through the rotating ring. **Tear off the #1 releasing paper ① (Blue)** to expose the adhesive of the pad, then paste the device closely on the skin.
**2** **Remove the #2 releasing paper ② (Orange),** keep the catheter in the center of the rotating ring and make sure the pad is fully attached to the skin.

**3** **Place the C-shape gauze** around the drainage catheter to absorb exudate. Make sure the gauze touches the skin.

**4** **Rotate the loop (blue ring) clockwise,** the hidden hoops will tighten tube as rotating. Do not use excessive force to rotate or tighten the tube too much.

**5** **Fasten two cable ties** to stabilize the direction of the tube. Use appropriate force according to different materials or specification of catheters.

**6** **Adjust/Release the hoop band**: Holding the unlock button on both sides of the rotating ring, and rotate anticlockwise the ring to loosen the hoop band.
